

Day 6 :

Task 1: Virtual Machine Scaleset And Azure Load balancer

- Created VM
- Took a snapshot for specialized image
- In the source VM installed apache2 and enabled it by
systemctl start httpd
systemctl enable httpd
- Ran the sample mario game files **main.js** and **index.html** inside
/var/www/html/index.html
- Then captured the image

- Launched The VMSS From that image also created Azure loadbalancer

The screenshot shows the Azure portal interface for a Virtual Machine Scale Set (VMSS) named 'vmss2'. The left sidebar displays the navigation menu with 'Virtual Machine Scale Set (VMSS)' selected. The main pane shows the 'Overview' tab for 'vmss2', which is a 'Virtual machine scale set'. The 'Essentials' section provides key details:

- Resource group:** FardeenAttar-rg
- Operating system:** Linux
- Status:** 1 out of 1 succeeded
- Subscription:** Vanguard Class Training
- Location:** East US 2
- Subscription ID:** 4dd60a42-8e1f-4d8b-b07a-fae39d4a2973
- Virtual network/subnet:** vnet-eastus2/snet-eastus2-1
- Orchestration mode:** Flexible
- Time created:** 2/9/2026, 7:26:00 AM UTC
- Tags:** purpose: fun

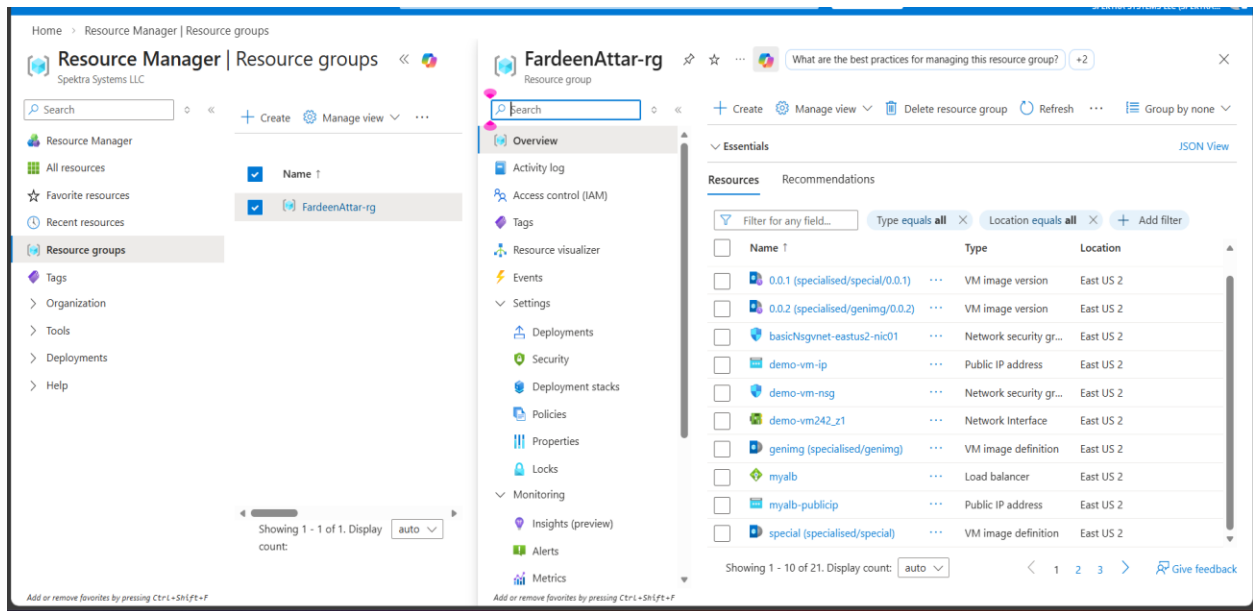

The 'Properties' tab is also visible, showing the 'Virtual machine profile' with 'Operating system' as 'Linux' and 'Provisioning state' as 'Succeeded'.

The screenshot shows the Azure portal interface for the 'Virtual machines' overview page. The left sidebar displays the navigation menu with 'Virtual machines' selected. The main pane shows the 'Virtual machines' overview, which includes a table of virtual machines and various management options.

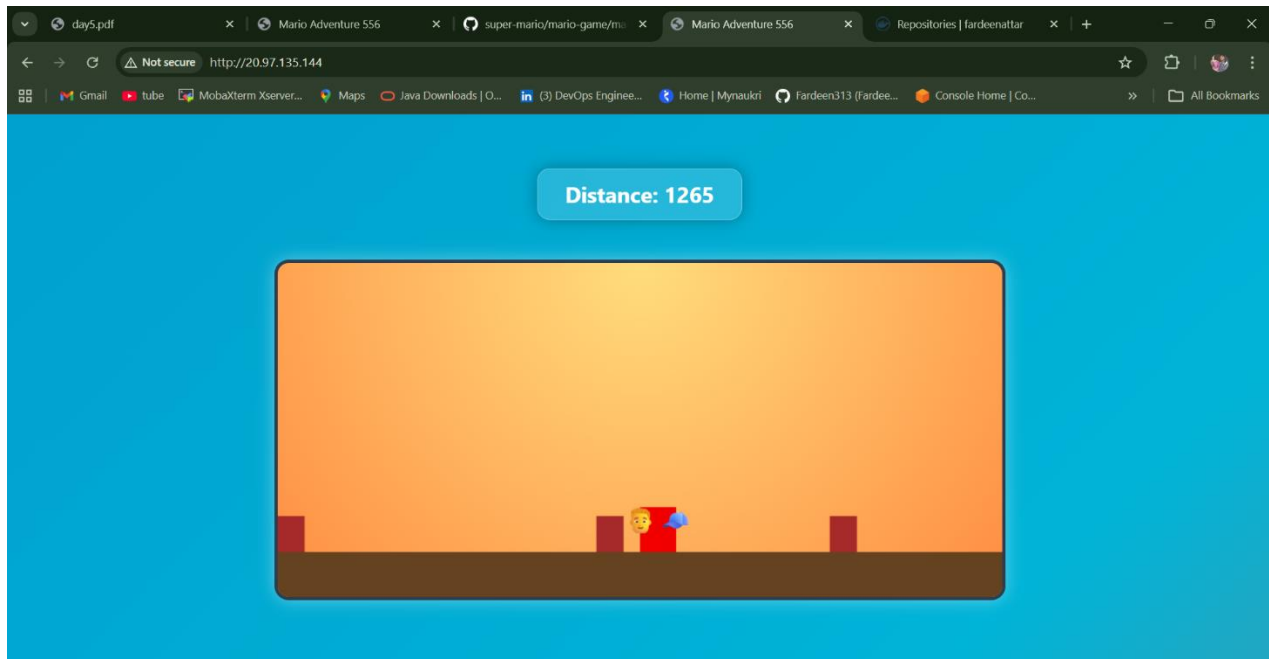

Virtual machines table:

Name	Subscription	Resource Group	Location	Status	Operating syst...	Size	Public IP addre...	Disks
vmss2_f81273d4	Vanguard Class...	FardeenAttar-rg	East US 2	Running	Linux	Standard_D2s_v3	20.97.135.144	1

The table shows one virtual machine, 'vmss2_f81273d4', which is in the 'Running' state. The 'Operating system' is 'Linux' and the 'Size' is 'Standard_D2s_v3'. The 'Public IP address' is '20.97.135.144' and there is '1' disk.

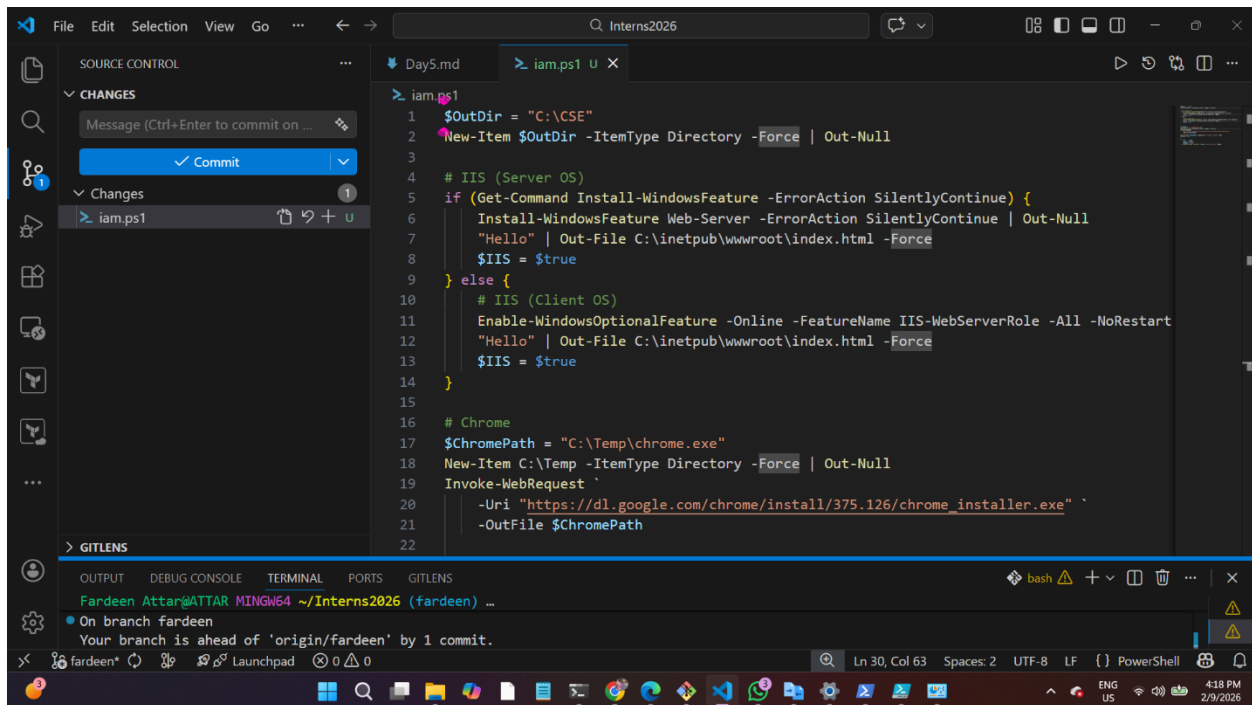

- Mario Game Accessable with Azure loadbalancer IP

Task 2 : Deploy Windows VM with Custom Data and Custom Script Extensions

- Created Custom Script to Install IIS chrome etc.

```
1 $OutDir = "C:\CSE"
2 New-Item $OutDir -ItemType Directory -Force | Out-Null
3
4 # IIS (Server OS)
5 if (Get-Command Install-WindowsFeature -ErrorAction SilentlyContinue) {
6     Install-WindowsFeature Web-Server -ErrorAction SilentlyContinue | Out-Null
7     "Hello" | Out-File C:\inetpub\wwwroot\index.html -Force
8     $IIS = $true
9 } else {
10    # IIS (Client OS)
11    Enable-WindowsOptionalFeature -Online -FeatureName IIS-WebServerRole -All -NoRestart
12    "Hello" | Out-File C:\inetpub\wwwroot\index.html -Force
13    $IIS = $true
14 }
15
16 # Chrome
17 $ChromePath = "C:\Temp\chrome.exe"
18 New-Item C:\Temp -ItemType Directory -Force | Out-Null
19 Invoke-WebRequest `
20     -Uri "https://dl.google.com/chrome/install/375.126/chrome_installer.exe" `
21     -OutFile $ChromePath
```

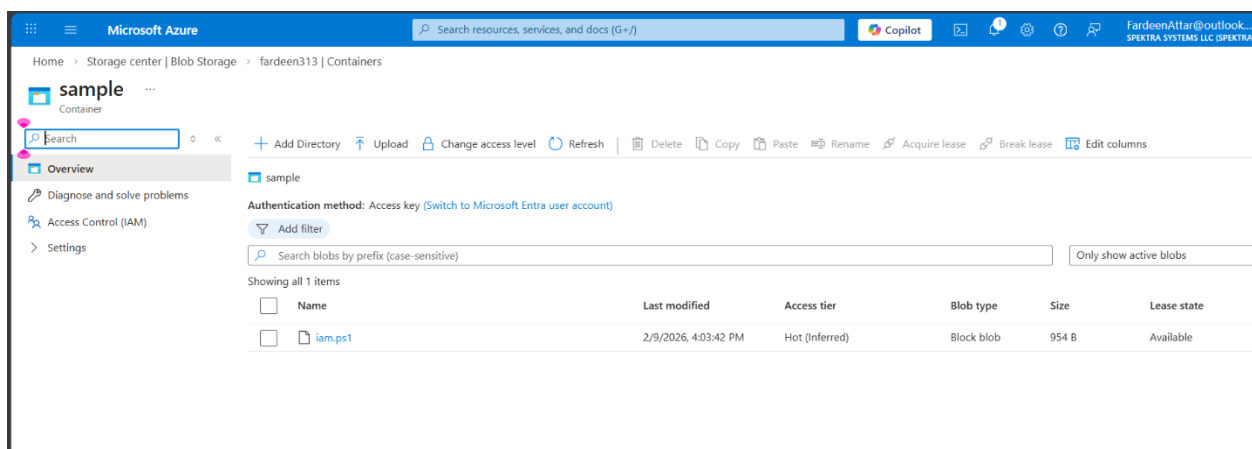

OUTPUT DEBUG CONSOLE TERMINAL PORTS GITLENS

Fardeen Attar@ATTAR MINGW64 ~/Interns2026 (fardeen) ...

On branch fardeen

Your branch is ahead of 'origin/fardeen' by 1 commit.

- Created Storage account and container to store .ps1 file
- Added .ps1 into container

Microsoft Azure

Home > Storage center | Blob Storage > fardeen313 | Containers

sample Container

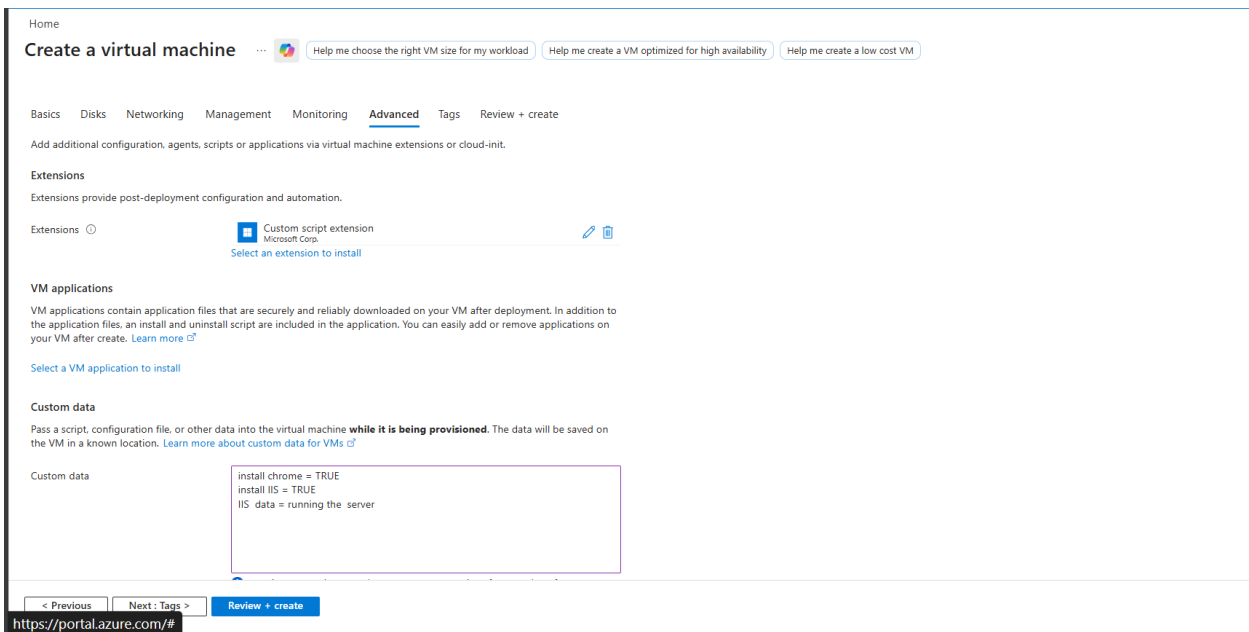

Authentication method: Access key (Switch to Microsoft Entra user account)

Search blobs by prefix (case-sensitive)

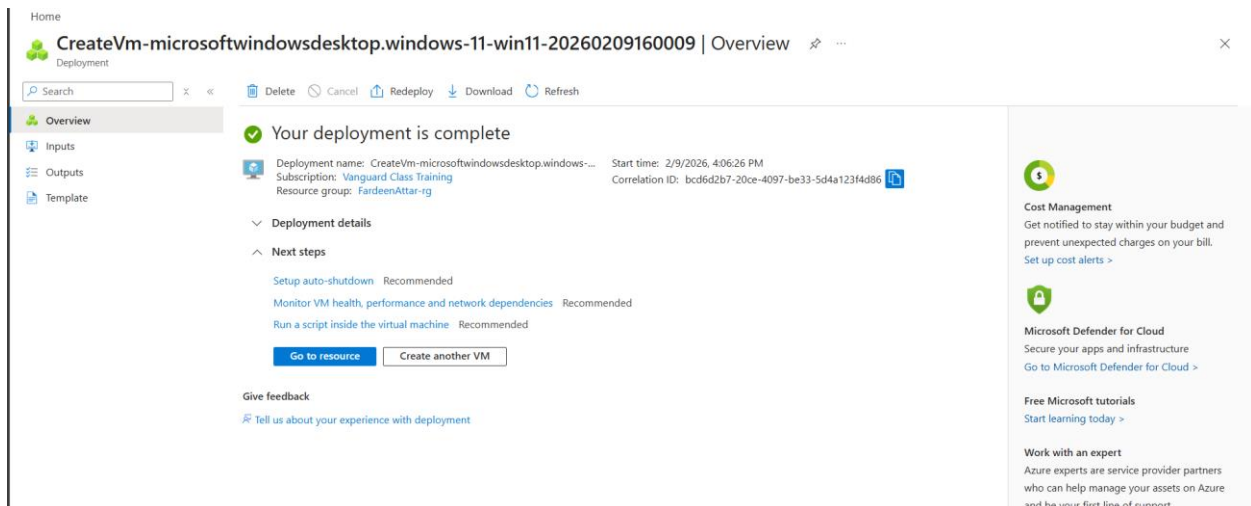

Showing all 1 Items

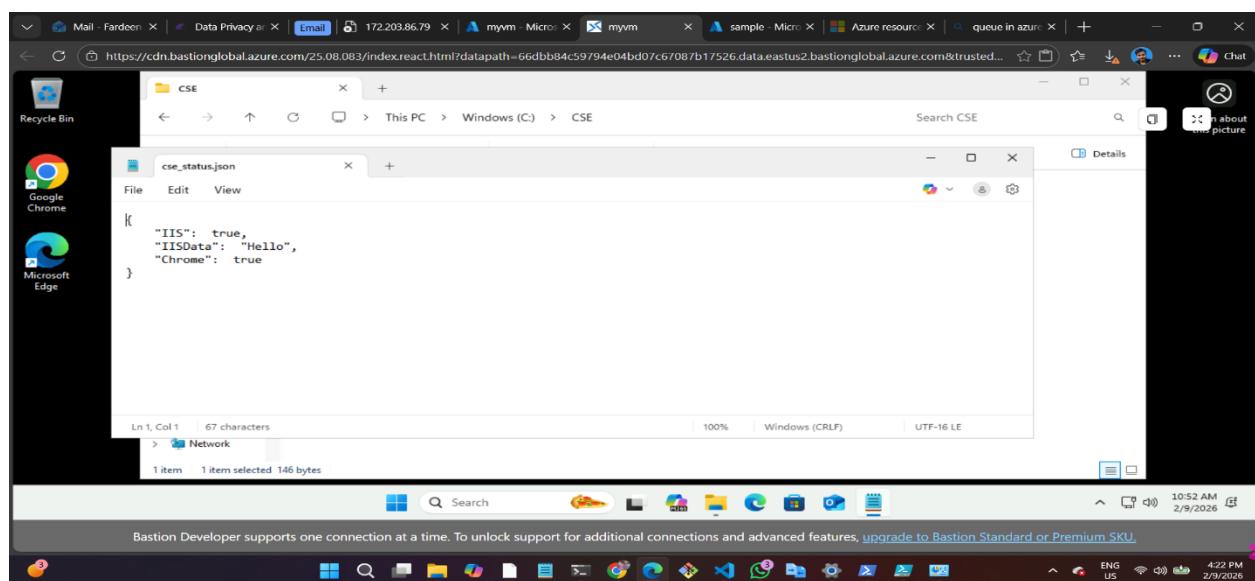

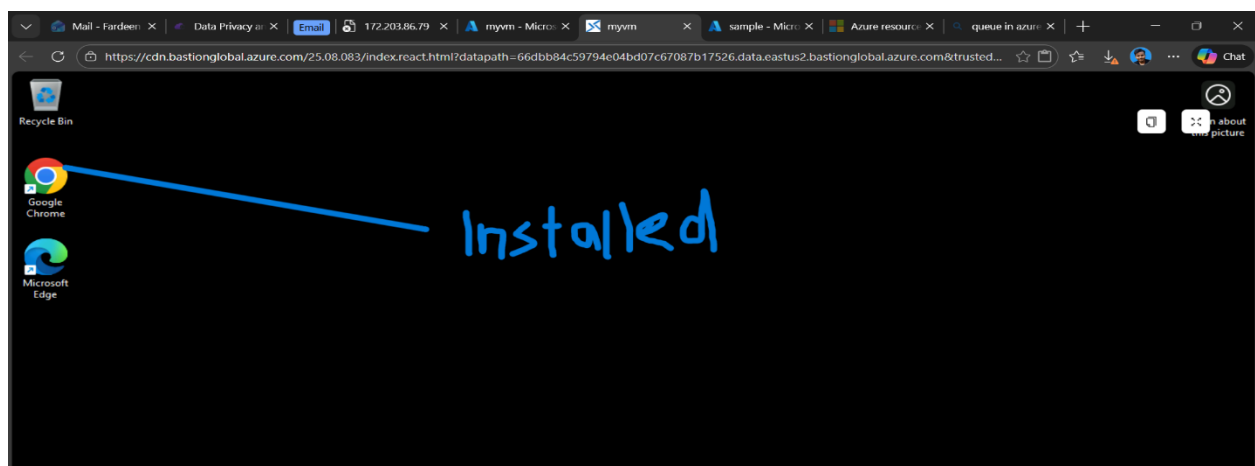

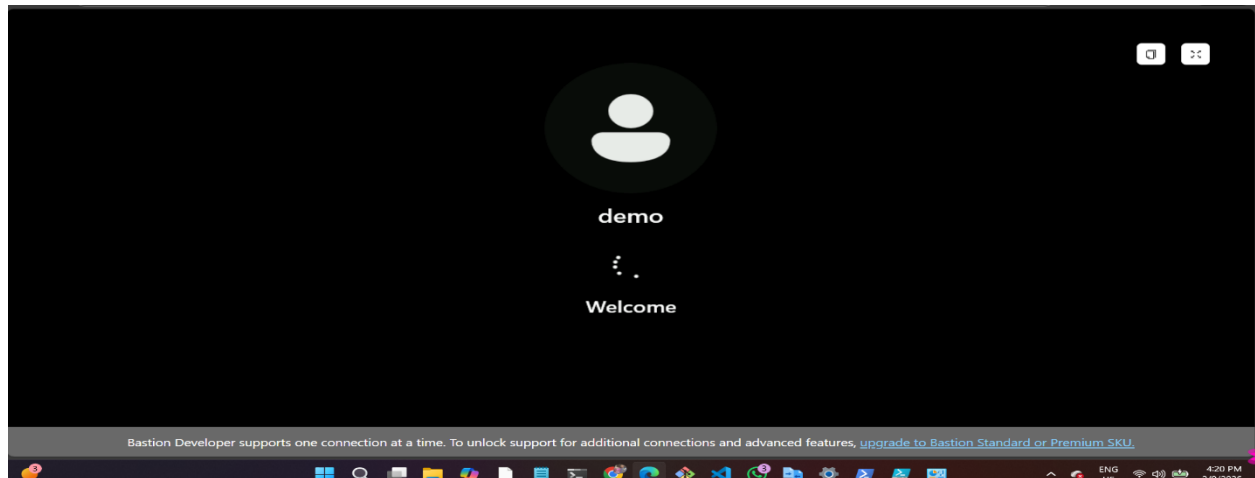

☐	Name	Last modified	Access tier	Blob type	Size	Lease state
☐	iam.ps1	2/9/2026, 4:03:42 PM	Hot (Inferred)	Block blob	954 B	Available

- Added Custom Data Script and also added custom data script extensions and selected .ps1 file from previous container

- Deployed The VM and Connected

Successful JSON output
