

create a vm using a terminal then connect it using terminal only then write a script to host the static website inside the vm, add arm template and then proceed with the task

```
PS C:\Interns2026> az vm create `
>> --resource-group varshabv06-rg `
>> --name vinvm06 `
>> --image Win2022Datacenter `
>> --admin-username azureuser `
>> --admin-password "VarshaBV@123" `
>> --size Standard_D2s_v5 `
>> --location centralindia
The default value of '--size' will be changed to 'Standard_D2s_v5' from 'Standard_DS1_v2' in a future release.

  ]
}
```

Examples from AI knowledge base:

```
az deployment group validate --resource-group testrg --template-file {template-file}
Validate whether a template is valid at resource group.
```

```
az deployment group validate --parameters MyValue=This MyArray=@array.json --resource-group testrg --template-uri
https://myresource/azuredeploy.json
Validate whether a template is valid at resource group. (autogenerated)
```

```
https://docs.microsoft.com/en-US/cli/azure/deployment/group#az\_deployment\_group\_validate
Read more about the command in reference docs
